Introduction to Hypertext Pre-Processor

LEARNING OBJECTIVES

- To understand the importance of Web Application
- To know the Server side Scripting Language
- To know the features of PHP (Hyper Text Pre-processor)
- To know the Basics of Web development process
- To understand Webserver Installation and Configurations

4.1 Introduction to Hypertext Pre-Processor (PHP)

AHH7HB

Internet and Web based online applications are performing very important role in business and entertainment industry. Two decades back, a famous quote

> **"If your business establishment is not on the Internet (online based), then your business will be out of business context."**
>
> **Founder of Microsoft- Bill Gates**

The Web based Internet application ensures the success of critical business in real world competitions. The legacy programing languages didn't meet out the expectations of latest Internet concepts and executions.

In earlier 1990's British scientist Tim Berners-Lee introduced the concept of Internet and **W**orld **W**ide **W**eb (WWW). These concepts required a new set of programming languages over the network communication. These programming languages are recently called as Web scripting languages.

The Web scripting languages has many policies which is easy to handle and solve the critical business problems around the world. In Later 1990's many Web scripting languages were introduced to support the Internet online business.

DO YOU KNOW?

PHP is one of the most widely used and recognizable technologies in use on the internet. Originally PHP stood for "Personal Home Page", though more recently it has been changed to stand for "PHP: Hypertext Preprocessor". However, no matter what it is called, PHP is a fundamental part of any dynamic web page.

PHP (Hypertext Pre-processor) is a one of the important server side Web
