Comparison Operators:

Comparison operators perform an action to compare two values. These values may contain integer or string data types (Number or Strings). Refer Table 4.3.

Table 4.3 PHP Comparison operators

Symbol	Operator Name	Symbol	Operator Name
==	Equal	>	Greater than
===	Identical	<	Less than
!=	Not equal	>=	Greater than or equal to
<>	Not equal	<=	Less than or equal to
!==	Not identical		

Increment and Decrement Operators:

Increment and decrement operators are used to perform the task of increasing or decreasing variable's value. This operator is mostly used during iterations in the program logics. Refer Table 4.4.

Table 4.4 PHP Increment and Decrement operators

Operator	Name	Description
++$x	Pre-increment	Increments $x value by one, then returns $x
$x++	Post-increment	Returns $x, then increments $x by one
--$x	Pre-decrement	Decrements $x by one, then returns $x
$x--	Post-decrement	Returns $x, then decrements $x by one

Logical Operators:

Logical Operators are used to combine conditional statements. Refer Table 4.5.

Table 4.5 PHP Logical operators

Symbol	Operator Name	Example	Result
&&	And	$x && $y	True if both $x and $y are true
||	Or	$x || $y	True if either $x or $y is true
!	Not	!$x	True if $x is not true
xor	Xor	$x xor $y	True if either $x or $y is true, but not both
