find a template called `articles/new` within `app/views` for the application. The format for this template can only be `html` and the handler must be one of `erb`, `builder` or `coffee`. Because you want to create a new HTML form, you will be using the `ERB` language which is designed to embed Ruby in HTML.
Therefore the file should be called `articles/new.html.erb` and needs to be located inside the `app/views` directory of the application.
Go ahead now and create a new file at `app/views/articles/new.html.erb` and write this content in it:

```
<h1>New Article</h1>
```

When you refresh http://localhost:3000/articles/new you'll now see that the page has a title. The route, controller, action and view are now working harmoniously! It's time to create the form for a new article.

5.2 The first form

To create a form within this template, you will use a *form builder*. The primary form builder for Rails is provided by a helper method called `form_for`. To use this method, add this code into `app/views/articles/new.html.erb`:

```
<%= form_for :article do |f| %>
  <p>
    <%= f.label :title %><br>
    <%= f.text_field :title %>
  </p>

  <p>
    <%= f.label :text %><br>
    <%= f.text_area :text %>
  </p>

  <p>
    <%= f.submit %>
  </p>
<% end %>
```

If you refresh the page now, you'll see the exact same form as in the example. Building forms in Rails is really just that easy!

When you call `form_for`, you pass it an identifying object for this form. In this case, it's the symbol `:article`. This tells the `form_for` helper what this form is for. Inside the block for this method, the `FormBuilder` object - represented by `f` - is used to build two labels and two text fields, one each for the title and text of an article. Finally, a call to `submit` on the `f` object will create a submit button for the form.
There's one problem with this form though. If you inspect the HTML that is generated, by viewing the source of the page, you will see that the `action` attribute for the form is pointing at `/articles/new`. This is a problem because this route goes to the very page that you're on right at the moment, and that route should only be used to display the form for a new article.
The form needs to use a different URL in order to go somewhere else. This can be done quite simply with the `:url` option of `form_for`. Typically in Rails, the action that is used for new form submissions like this is called "create", and so the form should be pointed to that action.
Edit the `form_for` line inside `app/views/articles/new.html.erb` to look like this:

```
<%= form_for :article, url: articles_path do |f| %>
```

In this example, the `articles_path` helper is passed to the `:url` option. To see what Rails will do with this, we look back at the output of `rake routes`:

```
$ bin/rake routes
      Prefix Verb   URI Pattern                  Controller#Action
    articles GET    /articles(.:format)          articles#index
             POST   /articles(.:format)          articles#create
 new_article GET    /articles/new(.:format)      articles#new
```
