Creating a car will save it in the `vehicles` table with "Car" as the `type` field:

```
Car.create color: 'Red', price: 10000
```

will generate the following SQL:

```
INSERT INTO "vehicles" ("type", "color", "price") VALUES ("Car", "Red",
10000)
```

Querying car records will just search for vehicles that are cars:

```
Car.all
```

will run a query like:

```
SELECT "vehicles".* FROM "vehicles" WHERE "vehicles"."type" IN ('Car')
```
