- none
- offset
- order
- preload
- readonly
- references
- reorder
- reverse_order
- select
- uniq
- where

All of the above methods return an instance of `ActiveRecord::Relation`.

The primary operation of `Model.find(options)` can be summarized as:

- Convert the supplied options to an equivalent SQL query.
- Fire the SQL query and retrieve the corresponding results from the database.
- Instantiate the equivalent Ruby object of the appropriate model for every resulting row.
- Run `after_find` and then `after_initialize` callbacks, if any.

1.1 Retrieving a Single Object

Active Record provides several different ways of retrieving a single object.

1.1.1 `find`

Using the `find` method, you can retrieve the object corresponding to the specified *primary key* that matches any supplied options. For example:

```
# Find the client with primary key (id) 10.
client = Client.find(10)
# => #<Client id: 10, first_name: "Ryan">
```

The SQL equivalent of the above is:

```
SELECT * FROM clients WHERE (clients.id = 10) LIMIT 1
```

The `find` method will raise an `ActiveRecord::RecordNotFound` exception if no matching record is found.

You can also use this method to query for multiple objects. Call the `find` method and pass in an array of primary keys. The return will be an array containing all of the matching records for the supplied*primary keys*. For example:

```
# Find the clients with primary keys 1 and 10.
client = Client.find([1, 10]) # Or even Client.find(1, 10)
# => [#<Client id: 1, first_name: "Lifo">, #<Client id: 10,
first_name: "Ryan">]
```

The SQL equivalent of the above is:

```
SELECT * FROM clients WHERE (clients.id IN (1,10))
```

The `find` method will raise an `ActiveRecord::RecordNotFound` exception unless a matching record is found for **all** of the supplied primary keys.

1.1.2 `take`

The `take` method retrieves a record without any implicit ordering. For example:

```
client = Client.take
# => #<Client id: 1, first_name: "Lifo">
```

The SQL equivalent of the above is:

```
SELECT * FROM clients LIMIT 1
```
