```
  NewsMailer.weekly(user).deliver_now
end
```

To add conditions to a `find_each` operation you can chain other Active Record methods such as `where`:

```
User.where(weekly_subscriber: true).find_each do |user|
  NewsMailer.weekly(user).deliver_now
end
```

1.2.1.1 Options for `find_each`

The `find_each` method accepts most of the options allowed by the regular `find` method, except for `:order` and `:limit`, which are reserved for internal use by `find_each`.

Two additional options, `:batch_size` and `:begin_at`, are available as well.

`:batch_size`

The `:batch_size` option allows you to specify the number of records to be retrieved in each batch, before being passed individually to the block. For example, to retrieve records in batches of 5000:

```
User.find_each(batch_size: 5000) do |user|
  NewsMailer.weekly(user).deliver_now
end
```

`:begin_at`

By default, records are fetched in ascending order of the primary key, which must be an integer.

The `:begin_at` option allows you to configure the first ID of the sequence whenever the lowest ID is not the one you need. This would be useful, for example, if you wanted to resume an interrupted batch process, provided you saved the last processed ID as a checkpoint.

For example, to send newsletters only to users with the primary key starting from 2000, and to retrieve them in batches of 5000:

```
User.find_each(begin_at: 2000, batch_size: 5000) do |user|
  NewsMailer.weekly(user).deliver_now
end
```

Another example would be if you wanted multiple workers handling the same processing queue. You could have each worker handle 10000 records by setting the appropriate `:begin_at` option on each worker.

`:end_at`

Similar to the `:begin_at` option, `:end_at` allows you to configure the last ID of the sequence whenever the highest ID is not the one you need. This would be useful, for example, if you wanted to run a batch process, using a subset of records based on `:begin_at` and `:end_at`

For example, to send newsletters only to users with the primary key starting from 2000 upto 10000 and to retrieve them in batches of 1000:

```
User.find_each(begin_at: 2000, end_at: 10000, batch_size: 5000) do
|user|
  NewsMailer.weekly(user).deliver_now
end
```

1.2.2 `find_in_batches`

The `find_in_batches` method is similar to `find_each`, since both retrieve batches of records. The difference is that `find_in_batches` yields *batches* to the block as an array of models, instead of individually. The following example will yield to the supplied block an array of up to 1000 invoices at a time, with the final block containing any remaining invoices:

```
# Give add_invoices an array of 1000 invoices at a time
Invoice.find_in_batches do |invoices|
  export.add_invoices(invoices)
end
```

1.2.2.1 Options for `find_in_batches`

The `find_in_batches` method accepts the same `:batch_size`, `:begin_at` and `:end_at` options as `find_each`.
