2.3 Hash Conditions

Active Record also allows you to pass in hash conditions which can increase the readability of your conditions syntax. With hash conditions, you pass in a hash with keys of the fields you want conditionalised and the values of how you want to conditionalise them:

Only equality, range and subset checking are possible with Hash conditions.

2.3.1 Equality Conditions

```
Client.where(locked: true)
```

The field name can also be a string:

```
Client.where('locked' => true)
```

In the case of a belongs_to relationship, an association key can be used to specify the model if an Active Record object is used as the value. This method works with polymorphic relationships as well.

```
Article.where(author: author)
Author.joins(:articles).where(articles: { author: author })
```

The values cannot be symbols. For example, you cannot do `Client.where(status: :active)`.

2.3.2 Range Conditions

```
Client.where(created_at: (Time.now.midnight -
1.day)..Time.now.midnight)
```

This will find all clients created yesterday by using a `BETWEEN` SQL statement:

```
SELECT * FROM clients WHERE (clients.created_at BETWEEN '2008-12-21
00:00:00' AND '2008-12-22 00:00:00')
```

This demonstrates a shorter syntax for the examples in Array Conditions

2.3.3 Subset Conditions

If you want to find records using the `IN` expression you can pass an array to the conditions hash:

```
Client.where(orders_count: [1,3,5])
```

This code will generate SQL like this:

```
SELECT * FROM clients WHERE (clients.orders_count IN (1,3,5))
```

2.4 NOT Conditions

`NOT` SQL queries can be built by `where.not`.

```
Article.where.not(author: author)
```

In other words, this query can be generated by calling `where` with no argument, then immediately chain with `not` passing `where` conditions.

3 Ordering

To retrieve records from the database in a specific order, you can use the `order` method.

For example, if you're getting a set of records and want to order them in ascending order by the `created_at` field in your table:

```
Client.order(:created_at)
# OR
Client.order("created_at")
```

You could specify `ASC` or `DESC` as well:

```
Client.order(created_at: :desc)
# OR
```
