```
class Tag < ActiveRecord::Base
  belongs_to :article
end
```

Now all of the following will produce the expected join queries using `INNER JOIN`:

12.2.1 Joining a Single Association

```
Category.joins(:articles)
```

This produces:

```
SELECT categories.* FROM categories
  INNER JOIN articles ON articles.category_id = categories.id
```

Or, in English: "return a Category object for all categories with articles". Note that you will see duplicate categories if more than one article has the same category. If you want unique categories, you can use `Category.joins(:articles).uniq`.

12.2.2 Joining Multiple Associations

```
Article.joins(:category, :comments)
```

This produces:

```
SELECT articles.* FROM articles
  INNER JOIN categories ON articles.category_id = categories.id
  INNER JOIN comments ON comments.article_id = articles.id
```

Or, in English: "return all articles that have a category and at least one comment". Note again that articles with multiple comments will show up multiple times.

12.2.3 Joining Nested Associations (Single Level)

```
Article.joins(comments: :guest)
```

This produces:

```
SELECT articles.* FROM articles
  INNER JOIN comments ON comments.article_id = articles.id
  INNER JOIN guests ON guests.comment_id = comments.id
```

Or, in English: "return all articles that have a comment made by a guest."

12.2.4 Joining Nested Associations (Multiple Level)

```
Category.joins(articles: [{ comments: :guest }, :tags])
```

This produces:

```
SELECT categories.* FROM categories
  INNER JOIN articles ON articles.category_id = categories.id
  INNER JOIN comments ON comments.article_id = articles.id
  INNER JOIN guests ON guests.comment_id = comments.id
  INNER JOIN tags ON tags.article_id = articles.id
```

12.3 Specifying Conditions on the Joined Tables

You can specify conditions on the joined tables using the regular Array and String conditions. Hash conditions provides a special syntax for specifying conditions for the joined tables:

```
time_range = (Time.now.midnight - 1.day)..Time.now.midnight
Client.joins(:orders).where('orders.created_at' => time_range)
```

An alternative and cleaner syntax is to nest the hash conditions:

```
time_range = (Time.now.midnight - 1.day)..Time.now.midnight
```
