```
  <strong>Text:</strong>
  <%= @article.text %>
</p>
```

With this change, you should finally be able to create new articles.

Visithttp://localhost:3000/articles/new and give it a try!

5.8 Listing all articles

We still need a way to list all our articles, so let's do that. The route for this as per output of `rake routes` is:

```
articles GET    /articles(.:format)          articles#index
```

Add the corresponding `index` action for that route inside the `ArticlesController` in the `app/controllers/articles_controller.rb` file. When we write an `index` action, the usual practice is to place it as the first method in the controller. Let's do it:

```
class ArticlesController < ApplicationController
  def index
    @articles = Article.all
  end

  def show
    @article = Article.find(params[:id])
  end

  def new
  end

  # snipped for brevity
```

And then finally, add the view for this action, located at `app/views/articles/index.html.erb`:

```
<h1>Listing articles</h1>

<table>
  <tr>
    <th>Title</th>
    <th>Text</th>
  </tr>

  <% @articles.each do |article| %>
    <tr>
      <td><%= article.title %></td>
      <td><%= article.text %></td>
      <td><%= link_to 'Show', article_path(article) %></td>
    </tr>
  <% end %>
</table>
```

Now if you go to http://localhost:3000/articles you will see a list of all the articles that you have created.

5.9 Adding links

You can now create, show, and list articles. Now let's add some links to navigate through pages.

Open `app/views/welcome/index.html.erb` and modify it as follows:

```
<h1>Hello, Rails!</h1>
<%= link_to 'My Blog', controller: 'articles' %>
```
