15 Force HTTPS protocol

Sometime you might want to force a particular controller to only be accessible via an HTTPS protocol for security reasons. You can use the `force_ssl` method in your controller to enforce that:

```
class DinnerController
  force_ssl
end
```

Just like the filter, you could also pass `:only` and `:except` to enforce the secure connection only to specific actions:

```
class DinnerController
  force_ssl only: :cheeseburger
  # or
  force_ssl except: :cheeseburger
end
```

Please note that if you find yourself adding `force_ssl` to many controllers, you may want to force the whole application to use HTTPS instead. In that case, you can set the `config.force_ssl` in your environment file.
