2.6 Controller Namespaces and Routing

You may wish to organize groups of controllers under a namespace. Most commonly, you might group a number of administrative controllers under an `Admin::` namespace. You would place these controllers under the `app/controllers/admin` directory, and you can group them together in your router:

```
namespace :admin do
  resources :articles, :comments
end
```

This will create a number of routes for each of the `articles` and `comments` controller.

For `Admin::ArticlesController`, Rails will create:

HTTP Verb	Path	Controller#Action	Named Helper
GET	/admin/articles	admin/articles#index	admin_articles_path
GET	/admin/articles/new	admin/articles#new	new_admin_article_path
POST	/admin/articles	admin/articles#create	admin_articles_path
GET	/admin/articles/:id	admin/articles#show	admin_article_path(:id)
GET	/admin/articles/:id/edit	admin/articles#edit	edit_admin_article_path(:id)
PATCH/PUT	/admin/articles/:id	admin/articles#update	admin_article_path(:id)
DELETE	/admin/articles/:id	admin/articles#destroy	admin_article_path(:id)

If you want to route `/articles` (without the prefix `/admin`) to `Admin::ArticlesController`, you could use:

```
scope module: 'admin' do
  resources :articles, :comments
end
```

or, for a single case:

```
resources :articles, module: 'admin'
```

If you want to route `/admin/articles` to `ArticlesController` (without the `Admin::` module prefix), you could use:

```
scope '/admin' do
  resources :articles, :comments
end
```

or, for a single case:

```
resources :articles, path: '/admin/articles'
```

In each of these cases, the named routes remain the same as if you did not use `scope`. In the last case, the following paths map to `PostsController`:

HTTP Verb	Path	Controller#Action	Named Helper
GET	/admin/articles	articles#index	articles_path
GET	/admin/articles/new	articles#new	new_article_path
POST	/admin/articles	articles#create	articles_path
