Both methods will list all of your routes, in the same order that they appear in `routes.rb`. For each route, you'll see:

- The route name (if any)
- The HTTP verb used (if the route doesn't respond to all verbs)
- The URL pattern to match
- The routing parameters for the route

For example, here's a small section of the `rake routes` output for a RESTful route:

```
    users GET    /users(.:format)          users#index
          POST   /users(.:format)          users#create
 new_user GET    /users/new(.:format)      users#new
edit_user GET    /users/:id/edit(.:format) users#edit
```

You may restrict the listing to the routes that map to a particular controller setting the `CONTROLLER`environment variable:

```
$ CONTROLLER=users bin/rake routes
```

You'll find that the output from `rake routes` is much more readable if you widen your terminal window until the output lines don't wrap.

5.2 Testing Routes

Routes should be included in your testing strategy (just like the rest of your application). Rails offers three built-in assertions designed to make testing routes simpler:

- `assert_generates`
- `assert_recognizes`
- `assert_routing`
-

5.2.1 The `assert_generates` Assertion

`assert_generates` asserts that a particular set of options generate a particular path and can be used with default routes or custom routes. For example:

```
assert_generates '/photos/1', { controller: 'photos', action: 'show',
id: '1' }
assert_generates '/about', controller: 'pages', action: 'about'
```

5.2.2 The `assert_recognizes` Assertion

`assert_recognizes` is the inverse of `assert_generates`. It asserts that a given path is recognized and routes it to a particular spot in your application. For example:

```
assert_recognizes({ controller: 'photos', action: 'show', id: '1' },
'/photos/1')
```

You can supply a `:method` argument to specify the HTTP verb:

```
assert_recognizes({ controller: 'photos', action: 'create' }, { path:
'photos', method: :post })
```

5.2.3 The `assert_routing` Assertion

The `assert_routing` assertion checks the route both ways: it tests that the path generates the options, and that the options generate the path. Thus, it combines the functions of `assert_generates` and `assert_recognizes`:

```
assert_routing({ path: 'photos', method: :post }, { controller:
'photos', action: 'create' })
```
