```
    @@all_roles = Role.all
  end
end
```

to autoload `Role` we are going to check if it is defined in the current or parent namespaces, one at a time. So, conceptually we want to try to autoload any of

```
Admin::BaseController::Role
Admin::Role
Role
```

in that order. That's the idea. To do so, Rails looks in `autoload_paths` respectively for file names like these:

```
admin/base_controller/role.rb
admin/role.rb
role.rb
```

modulus some additional directory lookups we are going to cover soon.

`'Constant::Name'.underscore` gives the relative path without extension of the file name where `Constant::Name` is expected to be defined.

Let's see how Rails autoloads the `Post` constant in the `PostsController` above assuming the application has a `Post` model defined in `app/models/post.rb`.

First it checks for `posts_controller/post.rb` in `autoload_paths`:

```
app/assets/posts_controller/post.rb
app/controllers/posts_controller/post.rb
app/helpers/posts_controller/post.rb
...
test/mailers/previews/posts_controller/post.rb
```

Since the lookup is exhausted without success, a similar search for a directory is performed, we are going to see why in the next section:

```
app/assets/posts_controller/post
app/controllers/posts_controller/post
app/helpers/posts_controller/post
...
test/mailers/previews/posts_controller/post
```

If all those attempts fail, then Rails starts the lookup again in the parent namespace. In this case only the top-level remains:

```
app/assets/post.rb
app/controllers/post.rb
app/helpers/post.rb
app/mailers/post.rb
app/models/post.rb
```

A matching file is found in `app/models/post.rb`. The lookup stops there and the file is loaded. If the file actually defines `Post` all is fine, otherwise `LoadError` is raised.

6.2 Qualified References

When a qualified constant is missing Rails does not look for it in the parent namespaces. But there is a caveat: When a constant is missing, Rails is unable to tell if the trigger was a relative reference or a qualified one.

For example, consider

```
module Admin
  User
end
```

and
