```
end
```

and revert the last change in `config/application.rb`:

```
config.generators do |g|
  g.orm             :active_record
  g.template_engine :erb
  g.test_framework  :test_unit, fixture: false
  g.stylesheets     false
  g.javascripts     false
end
```

If you generate another resource, you can see that we get exactly the same result! This is useful if you want to customize your scaffold templates and/or layout by just creating `edit.html.erb`, `index.html.erb` and so on inside `lib/templates/erb/scaffold`.

Scaffold templates in Rails frequently use ERB tags; these tags need to be escaped so that the generated output is valid ERB code.

For example, the following escaped ERB tag would be needed in the template (note the extra `%`)...

```
<%%= stylesheet_include_tag :application %>
```

...to generate the following output:

```
<%= stylesheet_include_tag :application %>
```

7 Adding Generators Fallbacks

One last feature about generators which is quite useful for plugin generators is fallbacks. For example, imagine that you want to add a feature on top of TestUnit like shoulda does. Since TestUnit already implements all generators required by Rails and shoulda just wants to overwrite part of it, there is no need for shoulda to reimplement some generators again, it can simply tell Rails to use a `TestUnit` generator if none was found under the `Shoulda` namespace.

We can easily simulate this behavior by changing our `config/application.rb` once again:

```
config.generators do |g|
  g.orm             :active_record
  g.template_engine :erb
  g.test_framework  :shoulda, fixture: false
  g.stylesheets     false
  g.javascripts     false

  # Add a fallback!
  g.fallbacks[:shoulda] = :test_unit
end
```

Now, if you create a Comment scaffold, you will see that the shoulda generators are being invoked, and at the end, they are just falling back to TestUnit generators:

```
$ bin/rails generate scaffold Comment body:text
      invoke  active_record
      create    db/migrate/20130924143118_create_comments.rb
      create    app/models/comment.rb
      invoke    shoulda
      create      test/models/comment_test.rb
      create      test/fixtures/comments.yml
      invoke  resource_route
       route    resources :comments
      invoke  scaffold_controller
      create    app/controllers/comments_controller.rb
      invoke    erb
      create      app/views/comments
      create      app/views/comments/index.html.erb
      create      app/views/comments/edit.html.erb
      create      app/views/comments/show.html.erb
```
