```
    def normalize_name
      self.name = self.name.downcase.titleize
    end

    def set_location
      self.location = LocationService.query(self)
    end
end
```

It is considered good practice to declare callback methods as protected or private. If left public, they can be called from outside of the model and violate the principle of object encapsulation.

3 Available Callbacks

Here is a list with all the available Active Record callbacks, listed in the same order in which they will get called during the respective operations:

3.1 Creating an Object

- `before_validation`
- `after_validation`
- `before_save`
- `around_save`
- `before_create`
- `around_create`
- `after_create`
- `after_save`
- `after_commit/after_rollback`

3.2 Updating an Object

- `before_validation`
- `after_validation`
- `before_save`
- `around_save`
- `before_update`
- `around_update`
- `after_update`
- `after_save`
- `after_commit/after_rollback`

3.3 Destroying an Object

- `before_destroy`
- `around_destroy`
- `after_destroy`
- `after_commit/after_rollback`

`after_save` runs both on create and update, but always *after* the more specific callbacks `after_create` and `after_update`, no matter the order in which the macro calls were executed.
