3.4 after_initialize and after_find

The after_initialize callback will be called whenever an Active Record object is instantiated, either by directly using new or when a record is loaded from the database. It can be useful to avoid the need to directly override your Active Record initialize method.

The after_find callback will be called whenever Active Record loads a record from the database. after_find is called before after_initialize if both are defined.

The after_initialize and after_find callbacks have no before_* counterparts, but they can be registered just like the other Active Record callbacks.

```
class User < ActiveRecord::Base
  after_initialize do |user|
    puts "You have initialized an object!"
  end

  after_find do |user|
    puts "You have found an object!"
  end
end

>> User.new
You have initialized an object!
=> #<User id: nil>

>> User.first
You have found an object!
You have initialized an object!
=> #<User id: 1>
```

3.5 after_touch

The after_touch callback will be called whenever an Active Record object is touched.

```
class User < ActiveRecord::Base
  after_touch do |user|
    puts "You have touched an object"
  end
end

>> u = User.create(name: 'Kuldeep')
=> #<User id: 1, name: "Kuldeep", created_at: "2013-11-25 12:17:49",
updated_at: "2013-11-25 12:17:49">

>> u.touch
You have touched an object
=> true
```

It can be used along with belongs_to:

```
class Employee < ActiveRecord::Base
  belongs_to :company, touch: true
  after_touch do
    puts 'An Employee was touched'
  end
end

class Company < ActiveRecord::Base
  has_many :employees
  after_touch :log_when_employees_or_company_touched

  private
  def log_when_employees_or_company_touched
    puts 'Employee/Company was touched'
  end
end
```
