```
    @success = true
    @users = users
  end

  def success?
    @success
  end

  def build
    self.project = Project.new(name: name)
    project.tasks = convert_string_to_tasks
    project.users = users
    project
  end

  def create
    build
    result = project.save
    @success = result
  end

  def convert_string_to_tasks
    task_string.split("\n").map.with_index do |one_task, index|
      title, size_string = one_task.split(":")
      Task.new(title: title,
               size: size_as_integer(size_string), project_order: index + 1)
    end
  end

  def size_as_integer(size_string)
    return 1 if size_string.blank?
    [size_string.to_i, 1].max
  end
end
```

Next, update the controller method to pass the user to the action:

security/05/app/controllers/projects_controller.rb

```
def create
  @workflow = CreatesProject.new(
    name: params[:project][:name],
    task_string: params[:project][:tasks],
    users: [current_user])
  @workflow.create
  if @workflow.success?
    redirect_to projects_path
  else
    @project = @workflow.project
    render :new
  end
end
```
