29. Explain how early UAVs were used in experimental combat simulations.
30. What was the significance of UAVs in improving pilot safety during training exercises?
31. Who was A. M. Low, and what was his contribution to early drone technology?
32. Describe the key innovations introduced by the *Aerial Target (1916)* and *Ruston Proctor Aerial Target (1917)*.
33. What were the defining features and uses of the *Kettering Bug (1918)*?
34. Why is the *Queen Bee (1935)* considering the first operational and mass-produced UAV?
35. How did the *Radioplane OQ-2 (1939)* mark the beginning of UAV industrialization?
36. Discuss the contributions of Reginald Denny to the advancement of drone technology.
37. What lessons were learned from the technological limitations of early UAVs?
38. Identify and explain the major technical and operational limitations of first-generation drones.
39. How did environmental factors such as wind and visibility affect early UAV performance?
40. In what ways did the experiences from early drone experiments influence the development of second-generation UAVs?
