reconnaissance, target tracking, and artillery adjustment, with remarkable success during the 1982 Lebanon War, where it provided live imagery that revolutionized tactical decision-making. Overall, the figure demonstrates the Scout's innovative blend of endurance, real-time data capability, and maneuverability, which set a new standard for modern tactical UAVs and influenced future UAV designs worldwide.

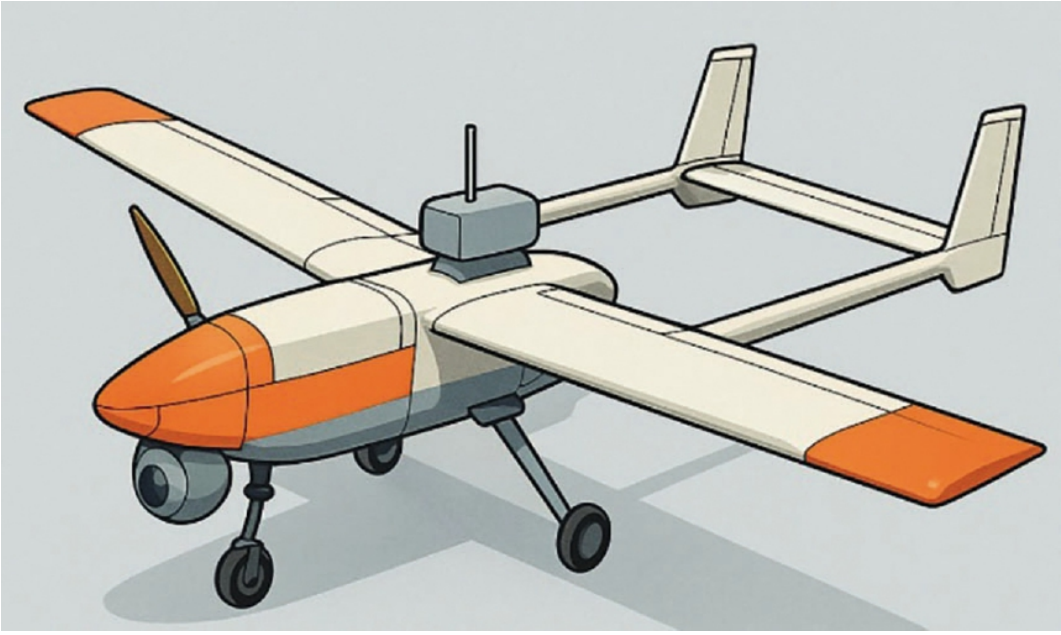

Figure 3.6 IAI Scout (1979) – the first tactical real-time reconnaissance UAV.⏎

3.5.2.4 RQ-2 Pioneer (1986)

The RQ-2 Pioneer (1986), developed jointly by Israel Aerospace Industries (IAI) and AAI Corporation (United States), represents one of the most successful and operationally significant second-generation unmanned aerial vehicles (UAVs). Designed for the US Navy and Marine Corps, the Pioneer was based on the Israeli IAI Scout platform but incorporated major improvements in flight control, navigation, and payload technology, enabling it to serve as a tactical reconnaissance and surveillance system. Compact, reliable, and versatile, the Pioneer was instrumental in
