30. Discuss the key challenges faced by second-generation drones in terms of endurance and range.
31. How did communication limitations affect UAV operations during the second-generation era?
32. Identify and explain the technical, operational, and strategic limitations of second-generation drones.
33. What were the primary maintenance and logistical challenges associated with UAV deployment?
34. Discuss the impact of environmental and weather conditions on UAV performance.
35. How did regulatory and airspace restrictions limit civilian applications of second-generation drones?
36. Summarize the key findings from the Ryan Model 147 “Lightning Bug” case study in the Vietnam War.
37. What was the significance of the IAI Scout during the 1982 Lebanon War in shaping future UAV systems?
38. Describe how the RQ-2 Pioneer changed the course of reconnaissance operations in the Gulf War.
39. Analyze the role of the CL-289 in NATO’s reconnaissance and surveillance strategies during the 1990s.
40. In conclusion, how did second-generation drones bridge the technological gap between early experimental UAVs and modern autonomous drone systems?
