19. Explain how the evolution of third-generation UAVs contributed to the development of autonomous UCAVs.
20. Compare the technological and operational advancements between early UAVs and third-generation models.
21. Describe the major features and capabilities of the RQ-1 Predator (1995).
22. Explain how the RQ-4 Global Hawk (1998) redefined strategic intelligence and reconnaissance missions.
23. Discuss the operational versatility of the MQ-9 Reaper (2007) and its role in counterterrorism operations.
24. What are the unique design and payload characteristics of the Heron TP (Eitan) (2004)?
25. How did the Dassault Neuron (2006) contribute to the advancement of stealth UAV technologies in Europe?
26. Describe the objectives and achievements of the BAE Systems Taranis (2010) program.
27. Why is the X-47B (2012) considered a milestone in naval UAV operations?
28. Explain how the Wing Loong I (2015) impacted global UAV accessibility and defense markets.
29. What were the major technological challenges faced by third-generation UAV developers?
30. Discuss the operational limitations of third-generation drones in highthreat environments.
31. How did strategic and logistical constraints affect the deployment of long-endurance UAVs?
32. Explain how cost and accessibility influenced the export and adoption of UAV technologies worldwide.
