Table 6.2 Global fifth-generation UAV models: AI, stealth, and r combat innovations.

Model/year	Developer/country	Key technological features	Primary role/application
Advanced Medium Combat Aircraft (AMCA) – 2024 (Projected)	Aeronautical Development Agency (ADA)/Hindustan Aeronautics Limited (HAL), India	Twin-engine stealth design, AI-enabled autonomous mode, internal weapon bays, and sensor fusion suite.	Multirole combat, manned/unmanned hybrid operation.
Kaan (TF-X) – 2023	Turkish Aerospace Industries (TAI), Turkey	Stealth configuration, super cruise capability, AI-based flight systems, optional unmanned operation.	Multirole fighter and UCAV integration.
KF-21 Boramae – 2021 (Block III Planned)	Korea Aerospace Industries (KAI), South Korea	Stealth shaping, advanced avionics, AI-assisted targeting, networked communication.	Air superiority and precision strike (manned / semi-autonomous).
