23. Discuss the ethical implications of autonomous weapons systems in drone warfare.
24. What does “meaningful human control” mean in the context of military drone ethics?
25. How do drones impact wildlife behavior and natural ecosystems?
26. Describe the sources of noise pollution in drone operations and methods to reduce them.
27. Why is sustainable manufacturing important for drone production and disposal?
28. What materials and technologies are being explored to make drones more environmentally friendly?
29. What are the common public fears associated with drone technology?
30. How can public education and transparency improve acceptance of drone use?
31. Discuss how community engagement contributes to safer and more ethical drone operations.
32. Explain the importance of building trust in autonomous drones for commercial and personal applications.
33. Identify major ways drones can be misused for illegal or harmful activities.
34. What are hacking, spoofing, and hijacking in the context of drone cybersecurity?
35. Discuss the technologies and strategies used in counter-drone defense systems.
36. How do soft-kill and hard-kill countermeasures differ in counter-drone operations?
37. How do extreme weather conditions, such as wind, rain, and temperature, affect drone performance?
