9. What is urban air mobility (UAM) and why is it considered the future of transportation?
10. Identify the main challenges in integrating passenger drones into city environments.
11. Why is public acceptance critical for successful UAM adoption?
12. Describe how quantum computing could enhance drone data processing.
13. Explain the role of quantum algorithms in real-time airborne decision-making.
14. List three potential sectors that may benefit from quantum-enhanced drone operations.
15. Why are 5G networks important for long-range BVLOS drone missions?
16. Explain how low-latency communication improves swarm coordination.
17. Describe how drones can operate as part of a national air traffic management system.
18. How could drones contribute to extraterrestrial research and planetary science?
19. What unique flight challenges must drones overcome on Mars?
20. Why is Titan considered suitable for rotorcraft missions like Dragonfly?
21. Discuss the potential role of drones in space resource mining.
22. Summarize the major tactical advantage of Military Swarm Drone systems.
23. Explain the Loyal Wingman concept and its importance in future air combat.
