expert lecturer at various international and national conferences, workshops, and faculty development programs. He has successfully guided numerous doctoral, master's, and undergraduate students in India and abroad and served as an examiner and reviewer for dissertations and theses internationally.

Prof. Dr. Arzu Eren Şenaras is a Professor in the Department of Econometrics at Bursa Uludağ University, where she also serves as the Head of the Operations Research Division. She is a distinguished academic and researcher specializing in operations research, system dynamics modeling, and simulation-based optimization. Her expertise spans logistics, supply chain management, energy systems, and complex system modeling, with a strong focus on practical applications of quantitative methods.

Prof. Dr. Eren Şenaras earned her bachelor's degree in Econometrics from Uludağ University in 2007, followed by a master's degree, during which she developed a novel simulation application for revenue determination in intercity bus routes. She completed her Ph.D. in Econometrics in 2016, focusing on the dynamic behaviors of exchange rates through system dynamics modeling. Since beginning her academic career as a research assistant in 2008, she has built a robust research and teaching portfolio, advancing to associate professor in 2018 before attaining full professorship. Her research contributions include over 20 peer-reviewed journal articles, numerous conference presentations, and interdisciplinary projects such as agent-based simulations for disaster-prepared food supply chains and modeling Turkey's electricity market. She has applied techniques like dynamic programming, causal loop diagrams, and ant colony optimization to real-world challenges in manufacturing and logistics. Beyond research, Prof. Dr. Eren Şenaras is a committed mentor, guiding graduate students in
