innovative projects that address sustainability, digital transformation, and practical problem-solving.

Dr. Chikesh Ranjan is currently serving as a Project Engineer in the Department of Mechanical Engineering at the National Institute of Technology, Rourkela, Odisha, India. He earned his Ph.D. in Mechanical Engineering from Birla Institute of Technology, Mesra, Ranchi in 2024, with a research focus on the tribological properties and thermal degradation kinetics of natural fiber-reinforced polymeric composites. Prior to this, he completed his Master of Engineering in Mechanical Engineering (Design of Mechanical Equipment) with distinction from the same institute in 2013 and a Bachelor of Engineering in Mechanical Engineering from Marathwada Institute of Technology, Aurangabad in 2010.

Dr. Ranjan has extensive academic and research experience, having worked as an Assistant Professor at R.T.C Institute of Technology, Ranchi from 2013 to 2020, where he also served as Program Officer for the National Service Scheme (NSS). He has a prolific scholarly output, with over 24 Scopus-indexed book chapters, 13 SCOPUS/WoS publications, four SCI/SCIE journal articles, and more than 14 authored books, both national and international, focusing on areas such as drones, robotics, polymeric composites, additive manufacturing, and smart materials.

His inventive contributions include multiple national and international patents, encompassing designs and applications in drones, renewable energy devices, automated systems, and functionally graded composites. He is an active educator, having organized and coordinated numerous workshops, boot camps, and training programs on drone technology, CAD/CAM, robotics, and automation. He is proficient in software tools such as AUTOCAD, CREO, CATIA, and ANSYS and has a keen interest in
