CHANGE FONT SIZE

Modifying the font size of your cell content is possible, allowing you to display text that is either larger or smaller than the default font size of 11 in an Excel workbook. The font size command can be found in the **Font** group under the **Home** tab. To adjust the font size for cells on row 1 in the '**Assignment 1**' workbook, select the **Font** size command and click on the dropdown arrow. Then, choose **14** as the new font size.

Highlight row 1 with a single click on the row header.

Next, change the font size to 14.

Next, click on row 3 and then change the font size to 12.
