SHRINK TO FIT

Shrink to Fit is an option that allows you to automatically reduce the font size of the text in a cell for it to fit within the boundaries of the cell.

In several situations, using the **Wrap Text** command is not applicable when you want all the text in a cell or range of cells to be visible without manually adjusting the font size for every cell.

The **Shrink to Fit** command becomes the only option to maintain uniform row height and column width on a worksheet.
