AUTOFITING

At the beginning of working on an Excel worksheet, you may encounter issues where the cell height or width does not adequately accommodate the cell's content, which can result in columns or rows appearing awkward and unsuitable for presentation as a final product. **AutoFit** can provide a quick solution to these issues to some extent, but other formatting techniques may still be necessary to achieve the desired final result.

Let us start by highlighting the entire worksheet section where you want to apply the formatting.

With the workbook **Assignment 1** open, Click and drag from Cell **A1** to Cell **N9** to select the table as illustrated below.

	A	B	C	D	E	F	G	H	I	J	K	L	M	N	O
1	Monthly Budget														
2															
3	Bills	January	February	March	April	May	June	July	August	Septembe	October	Novembe	December	Total	
4	Rent	2000	2000	2000	2000	2000	2000	2000	2000	2000	2000	2000	2000		
5	Phone	200	250	220	200	210	200	200	230	230	240	250	300		
6	Credit Car	200	150	200	200	230	120	300	203	203	220	230	250		
7	Food	250	230	240	244	245	250	290	300	350	305	345	400		
8	Candy	140	150	124	150	143	135	134	150	150	140	150	200		
9	Total														
10															

Cell **A1** to Cell **N9** is the cell range that covers the entire table.

Your table might not fall under these cell ranges; the idea is to have practical experience highlighting a range of cells.

The next step is to AutoFit the cell columns and rows.

Go to the **Home** tab and click on **Format** in the **Cells** group.
