CELL STYLES

Cell styles provide pre-defined cell formats, allowing rapid and consistent worksheet formatting. By applying a single-cell style, a selected cell or group of cells can be quickly formatted with multiple formatting options. This makes cell styles a convenient way to format cells efficiently.

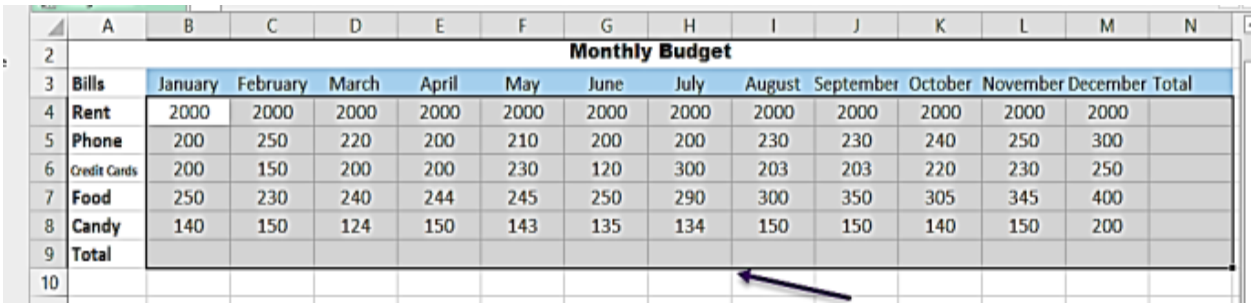

Applying cell styles on a worksheet change the format of the selected cell or range of cells in many ways, including

- using uniform font type, font size,
- text boldfacing or italic,
- borders, color, number outlines, and cell content alignments.

Follow these steps if you want to apply a cell style in Excel:

1. After opening your Excel workbook, go to the worksheet where the data you want to format is.
2. Select the cells you want to style.

   To select multiple cells, hold down the **Shift** key and then press the arrow keys or drag your cursor over the rows of cells.
