MOVING AND COPYING AN EXCEL WORKSHEET

Worksheets in Excel can be moved or copied for purposes such as rearranging the order of the worksheets within a workbook or using a copied worksheet as a template for a new worksheet with similar data.

An Excel worksheet can be moved or copied in several ways, including using your **mouse**, the **Home** tab ribbon, and **shortcut** keys.

How to move a worksheet with the mouse:

1. Go to the worksheet you wish to relocate and click on its tab.

1. Click and hold the worksheet tab, drag it to its new location in the same workbook, and release the mouse button when you are on the spot
