DELETING ROW(S) AND COLUMN(S) IN A WORKSHEET

Follow these steps to remove a row(s) or column(s) from a Worksheet:

1. Click on the row headings or column headings you wish to delete in the table. Holding the "**Ctrl**" key while clicking on the desired headers will allow you to select multiple rows or columns simultaneously.
2. Right-click on the selected rows or columns and then select "**Delete**" from the menu.

This will delete the selected row or column.

However, you can use the **Home** tab to delete selected row(s) or column(s).

Go to the **Delete** command on the **Cells** group.
