RENAMING AN EXCEL WORKSHEET

The edit tab at the bottom of an Excel workbook can be used to rename its worksheets. Each worksheet has a unique **tab** for easy navigation.

Renaming improves organization and clarity, making locating and referencing specific worksheets in a workbook easier. This is particularly useful for large or complex workbooks with multiple sheets containing related data or calculations.

In Excel, every worksheet has a name assigned by default, such as **Sheet1**, **Sheet2**, etc. It is, however, possible to rename a worksheet to something more meaningful or descriptive. Doing so will allow you to find the worksheet you are looking for more easily. For instance, if you have multiple worksheets in the same workbook, you may wish to give them names that reflect their contents or objectives.

To change the name of a worksheet, **right-click** on the worksheet tab and select the **Rename** option from the context menu.
