DELETING AN EXCEL WORKSHEET

If you delete a worksheet, it is a permanent action and cannot be undone. It is essential to keep this in mind while you do so.

If you accidentally delete a worksheet and the data you entered in it is lost, you can recover it using the **Undo** or **Ctrl+Z** shortcut key immediately. But if you save and close the workbook, you can’t recover the worksheet; you will need to create a new worksheet and enter the data again.

A worksheet can't be deleted if it is the only worksheet left in the workbook. You will have to create a new worksheet before the old one can be deleted.

Follow these steps to delete an Excel worksheet:

1. Make sure the workbook you want to delete is open.
2. Select the tab for the worksheet you wish to delete from the list of worksheets.
3. Click on the **Home** tab on the Excel ribbon.
4. Click on the **Delete** command in the **Cells** group.
5. Select **Delete Sheet** from the drop-down menu that appears.
