An example of carrying out basic **multiplication** is by using the formula;

=**A2*B2**

This formula multiplies the content or values in cells **A2** by **B2**.

When you press the **Enter** key, your result in cell **D2** will be **6**.

For **Division**, the basic formula is as follows;

=A1/B2

This formula carries out basic **division** calculations. The destination cell divides the value in cell **A1** by the value in cell **B2**.
