HOW TO CREATE A SIMPLE EXCEL FORMULA

A simple concept illustrated below is that of a Monthly Budget Worksheet.

Using the workbook you must have created named **Assignment 1,** the Total Bills for January will be calculated, and the result will appear in cell **B9.**

1. Select the cell where the result will appear. On the Monthly Budget sheet, we will create a formula to compute the **Total** for each month, starting with cell **B9**.

2. Click on cell **B9** and type in the **equals sign** =.

1. The operator we will be using is the plus sign +. This means we will add values in cells **B4**, **B5**, **B6**, **B7,** and **B8.**
