HOW TO EDIT AN EXCEL FORMULA

To edit an existing formula in a worksheet, click on the cell where you have the formula. The formula bar will automatically display the formula.

Click the formula bar and edit the formula, then press the **Enter** key when done to complete the process.

You can also double-click the affected cell to edit the formula directly.

When done, always press the **Enter** key to complete the process.

If you suddenly change your mind, press the **Esc** key.
