COPY/PASTE AN EXCEL FORMULA

Excel automatically updates the cell references in a formula when you copy it to a new location. To see this in action, follow these steps.

Open a bank Worksheet and enter values in cell **B2, B3, C2** and **C3.** Then enter the formula shown below in the formula bar into cell **B4**.

Select cell **B4**, right-click, and then click on **Copy** (or use the shortcut keys **CTRL + C**).
