REFERENCING A CELL WITHIN A WORKSHEET

This method is the most basic in referencing a cell within the same worksheet.

For example, if in cell **A2** you have a value **and** you want to refer to the value in the same cell **A2** to have the data appear in cell **B1**, the formula would be:

=A2

By doing this, the value you put in the cell where you use this reference will be the same as in cell **A2**.
