AUTOMATED REFERENCE TO ANOTHER WORKSHEET IN THE SAME WORKBOOK

Creating cell references to another sheet is much easier if you point Excel at the cell/range you want to refer to and let it do the work. You won't have to worry about missing exclamation points, quotes, or other format issues. The reference will be created automatically by Excel.

Here's how to create an automatic reference:

The illustration below shows we have **Station 1** and **Product Ordered** worksheets.

The idea is to refer to **Station 1** to get the List of **Products ordered** (Column B) into the **Product Ordered** sheet**.**
