REFERENCING ANOTHER OPENED WORKBOOK

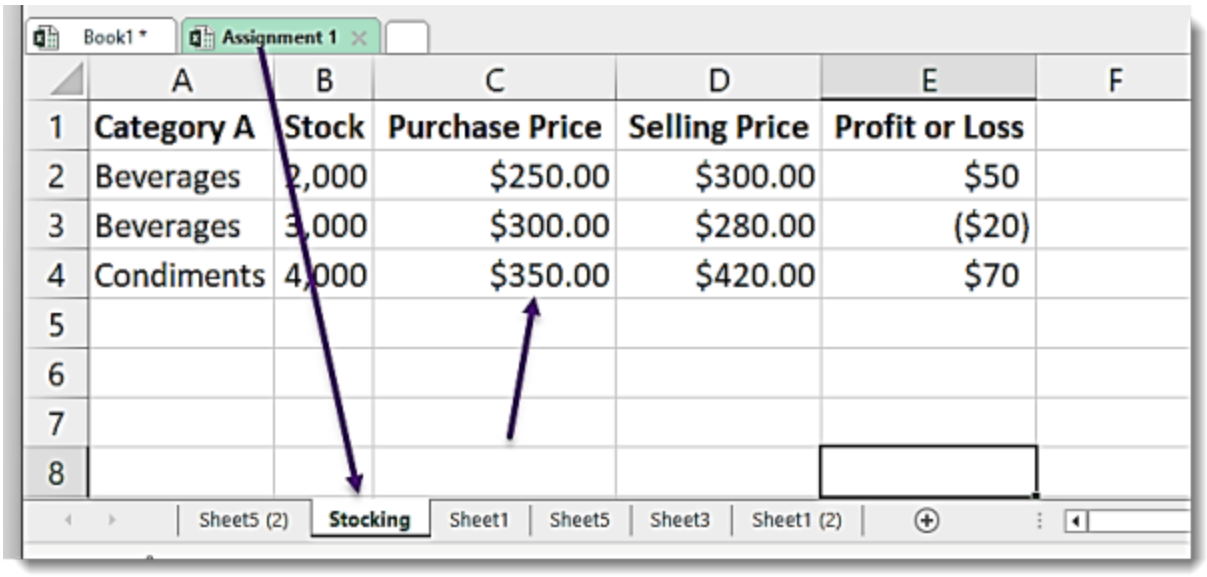

To reference another open Excel workbook, you must include the Workbook's name, the Worksheet's name, and the cell or range address.

The format for referencing an open Workbook is;

='[FileName]SheetName!CellAddress

Using the Workbook you must have created called '**Assignment1.xlsx**' and you want to reference cell **C4** in the Worksheet named **Stocking**, the reference would be as follows:

=[Assignment1.xlsx]Stocking!C4

If the name of the external Workbook or the Worksheet (or both) contains spaces, you must enclose the file name in square brackets and put the sheet name in single quotes.
