REFERENCING A CLOSED WORKBOOK

The best way to stay safe referencing a closed Workbook is to open the External Workbook, create the reference, and close the External Workbook when done.

As explained earlier, the formula bar will give you a clue about the source cells or range you referred to.

When you open the Workbook, you will notice the Formula bar does not display the file path.

You are only presented with the file name, Sheet name, and cell range address. When you close the external Workbook, Excel automatically includes a reference to its file path.

However, if you move the external file to a new location on your system or network, your Workbook's reference will not reflect the new file path. This will
