

Likewise, the parenthesis opened after the **AND** function is closed after the last condition.

If you count the number of opened parethesis, is equal to the number of closed parentheses. If this is not properly done, Excel will pop out an error message and possibly make suggestions for you to accept. Any suggestion made by Excel should be checked before confirming, or the result might be wrong.

Finally, the Excel formula will have to be entered in cell **D3** in the format below;

=IF(AND(B3>=5,C3>=10),"Admitted","Not Qualify")
