For example, you have an **IF** function to check if a certain cell value is greater than 5 **AND** another Cell value is Greater than **10**, **OR** another cell value equal to the text **US**. These means the conditions will be looking at three cells to come up with a result.

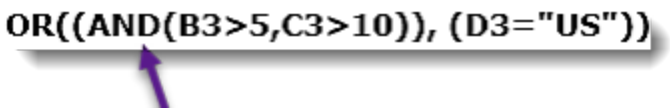

This can be written as:

=IF(OR((AND(B3>5,C3>10)), (D3="US")),"Admit","Deny")

	A	B	C	D	E	F	G	H
1	VISA LIST							
2	Name	Age	Score	Country	Remark			
3	James P.	6	11	Canada	Admit			
4	Paul L.	4	9	Canada	Deny			
5	Dmitri A.	5	14	Russia	Deny			
6	Joy D.	5	9	US	Admit			

In above example, the **AND** function is nested inside the **OR** function, Which are all nested inside the **IF** function.

- The **AND** function checks if the value in cell **B3** is greater than 5 and if the value in cell **C3** is greater than **10**.
