

	A	B	C	D	E
1			VISA LIST		
2	**Name**	**Age**	**Score**	**Country**	**Remark**
3	James P.	6	11	Canada	Admit
4	Paul L.	4	9	Canada	Deny
5	Dmitri A.	5	14	Russia	Deny

- The **OR** function checks if the value in cell **D3** equals the text **US**.

	A	B	C	D	E
1			VISA LIST		
2	**Name**	**Age**	**Score**	**Country**	**Remark**
3	James P.	6	11	Canada	Admit
4	Paul L.	4	9	Canada	Deny
5	Dmitri A.	5	14	Russia	Deny

- The **IF** function then returns "**Admit**" if either of the above conditions (AND, OR) you created is met and "**Deny**" if neither are met.

Remember, when using nested functions, the order of operations should be considered. The parenthesis plays a role in specifying the order of operations.
