An example of using the AND function will be to check if a cell value is between greater than 5 and less than10, like this:

=AND(B3>5,B3<10)

If you wish to have the output as "TRUE" when the condition is met, you can use the TRUE function in combination with the AND function like this:

=IF(AND(B3>5,B3<10),TRUE,"False")

This formula will return **TRUE** if the value in cell **B3** is greater than 5 and less than 10; otherwise, it returns "**False**" if the value does not met any of the conditions.

The TRUE function can also be used with the **OR** function to return true if any of the conditions are met.

For example, to check if a cell value is equal to "**Canada**" or "**US**" the **OR** function will look like this:

=OR(D3="Canada",D3="US")
