

To return "**TRUE**" when the condition is met, use the **TRUE** function in combination with the **OR** function entering the formula like this;

=IF(OR(D3="Canada",D3="US"),TRUE,"False").

The above formula will return **TRUE** if the value in cell **D3** is "Canada" or "US", and "False" if the value is not "Canada" or "US".

You can also use the TRUE function, combined with the NOT function, to return TRUE if the condition is false and False if the condition is True.

For example, to check if a cell value is not equal to 10, the NOT function is entered like this:

=NOT(B3=10)

However, to return a value as "**TRUE**" if the condition is met, you can use the TRUE function in combination with the **NOT** function like this:

=IF(NOT(B3=10),TRUE,"False")
