When you combine the **FALSE** function with the **AND** function, it checks multiple conditions and only returns true if all conditions you gave are met.

For example, to check if a cell value is greater than 10 and less than 15, the **AND** function is used like this:

=AND(C3>10,C3<15)

However, to return the value as **FALSE** when a specific condition is not met, you can use the **FALSE** function in conjunction with the **IF** and the **AND** function in the following way.

=IF(AND(C3>10, C3<15),"True",FALSE)

This formula in the above example returns "**True**" if the value in cell **C3** is greater than **10** and less than **15**, and **FALSE** if the value is not between **10** and **15**.

The **FALSE** function, in combination with the **OR** function, evaluates multiple conditions and returns **TRUE** if any conditions are met.
