CONCATENATE FUNCTION

The CONCATENATE Function syntax is:

CONCATENATE(text1, text2, ...)

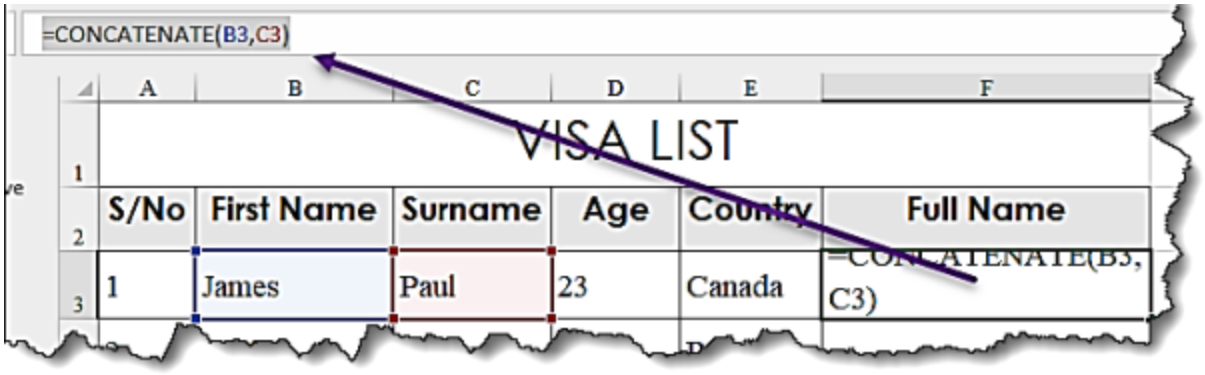

It is a function used to combine multiple text strings into one.

For example, if you have two columns **A** and **B** used to enter the **First Name** and the **Surname** in separate cells in a worksheet.

	A	B	C	D	E	F	G
1	VISA LIST						
2	S/No	First Name	Surname	Age	Country	Full Name	
3	1	James	Paul	23	Canada		
4	2	Paul	Lukeman	20	Poland		
5	3	Dimitri	Abagor	24	Russia		

The **CONCATENATE** function can be used to combine the content in cell **A3** and **B3** into cell **G3.**

However, there is no space between the two names. To add space, you will have to use the CONCAT Function.
