

The cell range from **C2** to **C8** can be filled by entering the formula in cell **C2** alone. Which is:

=LOWER(B2:B8)

You can also combine the LOWER function with other Excel functions, like the **IF** function, to create dynamic and advanced formulas.

For instance, when used together, the IF and LOWER functions automatically convert the text in a range of cells to lowercase based on specific conditions.

An illustration of using the **IF** and **LOWER** functions in conjunction is as follows:

=IF(LOWER(D3)="yes", "Admit", "Deny")
